

## **Section A: Section 1: TITLE OF THE PROJECT**

The section aims at a clear identification of the project including its applications and their limits. Particular attention should be paid to the use of wording that may induce fears or unrealistic promises.

to t	the use of wording that may induce rears of unrealistic promises.		
	Project title		
	Establishment of hepatic-patient derived organoids		
	Acronym of the project (if any)		_
	Type of organoid		
	Organoid for basic	research	$\triangleright$
	Factoroid (organoid for biopro	oduction)	
	Organoid for pre-clinical	research	
	Organoid for clinical	research	
	Organoid for cli	inical use	
		Others	
	Specify		
	Describe the usage of	of your planne	ed organoid
	Name of the organoid (avoid minigut, minibrain, synthetic brain	)	
	Avoid minigut, min		etic brain
	Hepatic-patient derived organoids (HPDO)		

<b>A6.</b>	Purpose of the project	1	
De.	scribe the aim of the project including appropriate regulatory documents Compliance: brief description of compliance requested docume		
A7.	Upload appropriate regulatory documents		
	ion B: Section 2: SOURCE MATERIAL		
	elements for this section are: 1) stem cell metadata based on ATCC model (batch, structural al data, maintenance and preservation protocol), 2) collection declaration (declaration or au	_	_
	ervation and preparation for scientific purposes of human body elements), mandatory for hing of possible drifts of starting material, 4) regulatory documents and medical ethics if any		
	g to donor consent).	(Icsui	CHOIIS OF USC
Sect	ion C: Does your research involve human material?		
C1.	Does your research involve human material ?		
	2 V C 2 J C C C C C C C C C C C C C C C C C	Yes	$\bowtie$
		No	
C2.	Is the material obtained from volunteers?		
		Yes	
		No	
C3.	An informed consent has been obtained ?		
		Yes	$\bowtie$
		No	
C4	D 11 3.4.1 6.4b 1.6	110	
C4.	Provide details of the informed content		
C5.	Is the volunteer a patient ?		ď
		Yes	
		No	

C6.	Is the genetic identity at arrival known?		
		Yes	
		No	
C7.	If starting material is obtained from a biopsy, are descriptors known?		
	Descriptors : gender, age, anatomical regions, diag	nosis, vir	al status
		Yes	$\bowtie$
		No	
C8.	Please list descriptors		
	Gender, age, anatomical region, diagnostic, weight		
<b>C9.</b>	Does the promoter of the research have clinical data on the patient?		
		Yes	$\bowtie$
		No	
C10.	Is the laboratory authorized to prepare and conserve human body elements for scientific purposes ?		
		Yes	$\bowtie$
		No	
C11.	Give details and references of the collection declaration		
	DC-2015-2565		
Secti	ion D: Is the starting material a cell line?		
D1.	Is the starting material a cell line?	nac	700 F00
	For example, indifferent origin, I		TCC, ESC
		Yes	
		No	$\bowtie$

<b>D2.</b>	Is the genetic identity at arrival known?		
		Yes	
		No	
D3.	Please specify (DNA sequence, SNPs, PCR, STR, CGF	I array)	
<b>D4.</b>	Is there a genetic quality control (karyotype, STR, PC)	R)?	
		No	
D5.	Please describe the procedure for genetic quality contr	<b>col</b> give an URL to a file describing t	the protocol
D6.	Is the cell line functionally validated?  For example, differenciation test for pluripotency of IPS	Cs, permeability tests for epithelia	l cells etc
		Yes	
		No	
D7.	Please describe the procedure	IIDI CILI II II II	
	You can indica	ate an URL to a file describing the	z proceaure
D8.	Is the cell identity validated after X passages?		
		Yes No	
D9.	Specify the number of passages (X)		

D10.	Are cell type markers identified ?		
		Yes	
		No	
D11.	List the different markers used		
D12.	Is the number of passages at arrival known?		
		Yes	
		No	
D13.	Is the number of possible, or required, passages before genesis of organoids defined?		
		Yes	
		No	
D14.	Are the storage conditions known?		
		Yes	
		No	
D15.	Please describe preservation protocol (culture, freezing, thawing protocol, storage modalities)		
D16.	Does the material contain mutations (genetic disease)?		
		Yes	
		No	
D17.	Is the sanitary status known?		
		Yes	
		No	

D18.	Please give details tests (mycoplasma, bacteriological, fungal)	
Secti	on E: Is the starting material primary cells of patients?	
	2012 20 15 one sourcing material primary cons or patients.	
E1.	Is the starting material primary cells of patients?	
	Yes	$\triangleright$
	No	
E2.	Is the genetic identity at arrival known?	
	Yes	
	No	$\stackrel{\leftarrow}{\boxtimes}$
E3.	Please specify (DNA sequence, SNPs, PCR, STR, CGH array)	
E4.	Is there a genetic quality control (karyotype, STR, PCR)?	
	Yes	
	No	$\boxtimes$
E5.	Please describe the procedure for genetic quality control  You may give an URL to a file describing	the protocol
	Tou may give an ORD to a fue describing	inc protocol
<b>E6.</b>	Is the cell line functionally validated ?	
120.	For example, differenciation test for pluripotency of IPSCs, permeability tests for epitheli	al cells etc
	Yes	
	No	

E7.	Please describe the procedure	You can indicate an URL to a file describing the procedure
E8.	Is the cell identity validated after X passages?	Yes
		No No
E9.	Specify the number of passages (X)	
E10.	Are cell type markers identified?	
		Yes
		No
E11.	List the different markers used  CK19 (bile ducts marker), CD44 (sinusoids and portal areas qPCR and IF staining	s marker), Ki67 (proliferation) by RT-
E12.	Is the number of passages at arrival known?	Yes
		No
E13.	Is the number of possible, or required, passage organoids defined?	es before genesis of
		Yes
		No
E14.	Are the storage conditions known?	Yes 🔀
		No No

E15.	Please describe preservation protocol (culture, freezing, thawing		
	protocol, storage modalities)		
	3 wells in 1mL in freezing solution (10%DMSO, 90% FBS) and frozen gradually, decrease temporature in Mister Frosty (1°/min) to 20°C before long term eteroge at 150/106°C.	sing	
	temperature in MisterFrosty (-1°/min) to -80°C before long-term storage at -150/196°C

<b>J3.</b>	Describe sequence and duration of differentiation treatments			
	After day 5, change media to Organoid differentiation medium for 10 days			
J4.	Are culture supports treated?	Yes No	× i	
J5.	Describe support treatments, seeding conditions and frequency of media changes  Treated Costar (ref 3548) 48 wells plates. Media changes every 2-3 days.			
J6.	Is there a quality control for the differentiation process?	Yes No	× i	
J7.	Provide details (e.g. morphology, material homogeneity, max and min confluence, proliferation, functional test, monitoring of markers, possibly sorting, mortality rate)  Morphology and monitoring markers with RT-qPCR			
Secti	ion K: Does organoid generation make use of matrices?			
K1.	Does organoid generation make use of matrices ?	Yes No		

K2.	Describe the nature of the matrix (matrigel, hydrogels, hyaluronic acid, human decellularized matrix etc.)	
	Matrigel Growth Factor Reduced basement membrane Matrix (Corning)	
17.2		
К3.	Give matrix concentration  100% Matrigel (concentration depends on lot number)	
K4.	Let provide detail preparation method (temperature, polymerization time, drop or layer structure, etc.)	
	48 well plate 25μL drop per well or 24-well plate 50μL drop per well and 10 minutes polymerization at 37°C	
K5.	Give seeding density per matrix volume unit	
	3 wells from 1 well for a passage; 3 wells in a a cryovials	
K6.	Specify volume and number of drops of matrix per unit area in the culture medium	
	48 well plate 25μL drop per well or 24-well plate 50μL drop per well	
K7.	Specify amount of medium depending on the size of the well	
	For 48 well plate 250μL or 24-well plate 500μL of medium per well	

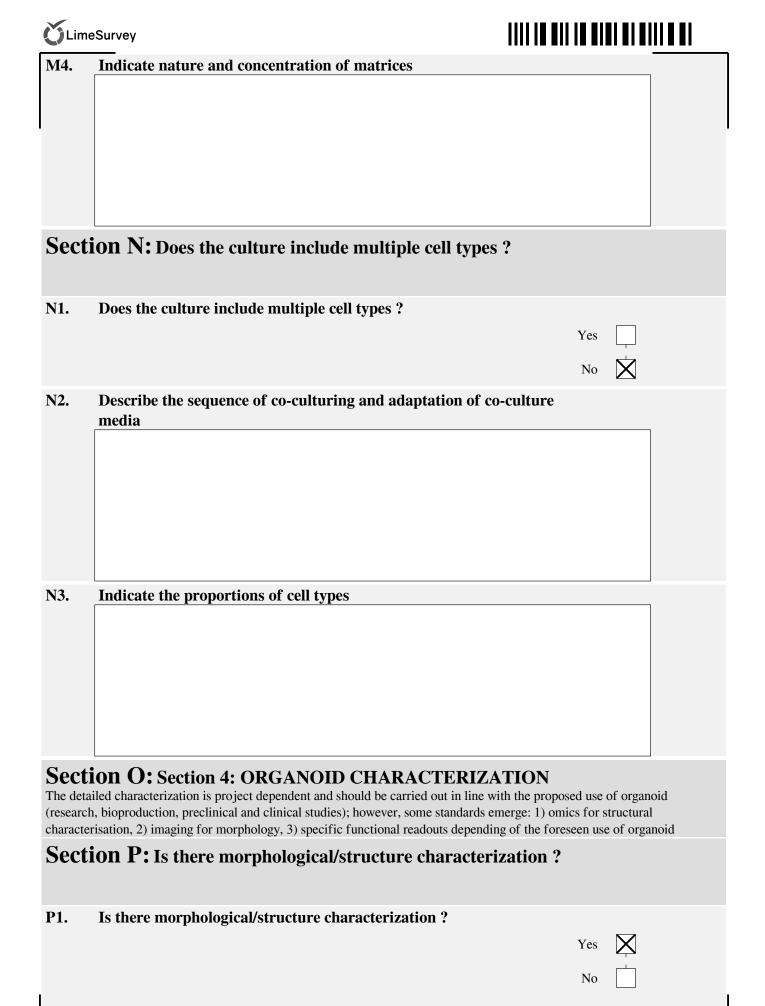

K8.	Describe matrix dissociation method for organoid recovery	
	Mechanical dissociation using cold Gentle Cell Dissociation Reagent (GCDR, stemcell technologies).  Matrigel domes were pipetted 20 times in GCDR in order to fragment organoids and dissolve Matrigel.  Cold DPBS was added to dilute at 1:2 and then centrifugated 5min	
К9.	Describe method of dissociation of organoids for their expansion  Mechanical dissociation using cold Gentle Cell Dissociation Reagent (GCDR, stemcell technologies).  Matrigel domes were pipetted 20 times in GCDR in order to fragment organoids and dissolve Matrigel.  Cold DPBS was added to dilute at 1:2 and then centrifugated 5min. 3 wells from 1 well for 1 passage.	
Secti	ion L: Does the culture take place on solid 3D support ?	
L1.	Does the culture take place on solid 3D support (example: mineral support for bones, support for liquid-gas interfaces) ?  Yes  No	
L2.	Describe preparation method of the 3D solid support (composition of the medium to be freeze-dried, freeze-drying conditions)	
L3.	Give details on seeding method	

L4.	List biocompatible materials used (PDMS, COC, Silicon, etc.)	
L5.	Indicate chip design (provide a map)	
L6.	Give the physical characteristics of the chip	
Secti	ion M: Does the organoid grow in suspension (self-organization)?	
M1.	Does the organoid grow in suspension (self-organization)?  Yes  No	
M2.	Specify type of container	
M3.	Describe nature and protocol of the agitation	

P2.	Describe appearance, size, shape [circularity, tubularity, regularity of contour (budding)]	
	Proliferation state: round organoids with cystic growth appearance and defined contours, size between 20-100  20-100	
	Differentiation state (Day 15): presence of pseudogland-like structure in HCCO, round organoids more	
	compact and opaque, size between 50-200μm	
P3.	Evaluate opacity/refringency.	
15.	Differentiation state, yes opaque and less during proliferation state	
P4.	Quantify intra and inter-organoid homogeneity	
P5.	Develop expected morphological, architectural and ultrastructural features, organization of cell types (identity, proportions, distribution)	
	Morphologic features similar to the tissue of origin	
Sect	tion Q: Is there molecular characterization?	
Q1.	Is there molecular characterization?	
	Yes No	

Q2.	Give elements of genomics, transcriptomics, metabolomics, proteomics  Proliferation state: CD90, CD44 by RT-qPCR at Day 5, GATA4, CK19,Ki67, F-Actin by IF Differentiation state: CYP3A4, Albumin, Ki67, CD44 and LGR5 by RT-qPCR at Day 15, Decrease of GATA4 and Ki67, increase of Album by IF	
Q3.	Indicate expected specific molecular markers, epigenetic characteristics	
Secti	ion R: Is there functional characterization?	
R1.	Is there functional characterization?  Yes  No	
R2.	What are qualitative and (if possible) quantitative functional characteristics	
R3.	If treatments are done, detail treatment protocol, response to treatments (pharmacological, chemical, physical, hormonal, etc.), and evaluation (quantitative or qualitative)	

Secti	on S: Are traceability and organoid drift evaluated?	
<b>S1.</b>	Are traceability and organoid drift evaluated ?  Yes No	
S2.	Describe how traceability of components is evaluated (batches, suppliers etc., environments, complements)  Yes, traceability of every components (batches number, expiration dates, etc)	
S3.	Indicate criteria for traceability of conditioned media (drift of cells used for conditioning, control of lines as for those at the origin of the organoid), control of at least one of the growth factors)  Yes, traceability of every components used for conditioned media (batches number, expiration dates, etc)	
S4.	Describe qualitative drift criteria (morphological, structural, functional, molecular, etc.) specific to each organoid. Specify indices if applicable  Morphological and structural by HES, IF markers and RT-qPCR markers	
S5.	How is robustness evaluated (same starting cells, same organoid).  Specify indices if applicable	

## **Section T:** Section 5: USE OF ORGANOIDS

The critical element in this section is the robutness of the preparation and characterization of the organoid. To anticipate further use of organoids from basic to development of innovative applications (for instance, the use of Good Laboratory practices will facilitate the transition from basics to preclinical research).

T1.	What is the domain of application of the organoid ?	
	Basic research	X
	Bioproduction	
	Preclinical research (Pharmacology, toxicology,)	
	Clinical research (personalized, predictive and regenerative medicine, transplantation)	
	Other	
T2.	Are GLP (good laboratory practice) required for organoid production?	
	Yes	
	No	
T3.	Give details for GLP	
T4.	Are GMP (good manufactory practice) required for organoid	
	production ?  Yes	
	No	
T5.	Give details for GMP	

Т6.	Indicate functional similarity criterion between the organoid and the mimicked organ (battery of controls to be performed with target values)	
Т7.	Is the expansid used for preclinical development of a drug condidate	
17.	Is the organoid used for preclinical development of a drug candidate (IND file) ?	
		Yes No
T8.	Indicate the number of usable passage for drug candidate	· · · · ·
T9.	Is the organoid used to define predictive signatures of responses (companion test)?	
		Yes
7D4.0	T. P. de de la collection de cable de casa ser ser communication de cable	No
T10.	Indicate the number of usable passages for companion test	
T11.	Is the organoid used to validate a care protocol (specific patient) on a cohort: choice of a therapy	
		Yes
		No
T12.	Indicate the number of usable passages for care protocol	
T13.	Is the organoid used for Domain 1: Care protocol (specific patient)? (validation of the protocol of use of the organoid for the orientation of the therapeutic choice)	
		Yes
		No L

T14.	Specify process for GMP certification, total traceability of the components, qualification of the components
T15.	Give criterion of similarity between the organoid and the biopsy
T16.	Is the organoid used, for Domain 2: Use in regenerative medicine (same as cell and tissue therapies)?
	Yes
	No No
T17.	Specify process for GMP certification, total traceability of the components, qualification of the components
	components, quantitation of the components
T18.	Specify functionality criteria, safety (Derivation of biological material and evaluation of the risk of cancer)

	•••••• <u>•••</u>
T19. Specify others usages of organoid	
Section U: END OF SURVEY	
This is the last section of this survey.	
You can use the "Resume later" button at the top-right of the screen to save your answers and come back.  If you are done, you can press the "Submit" button, you will then be able to print your answers.	k to this form later.
Your answers were registered.
